

Hey, Nice to meet you! I am Bhargav.

Bhargav Ponnappalli

I am a Web Engineer, Trainer and Codementor.

ABOUT ME

Learn. Build. Teach.

```
/*CSS properties*/
font-size: 1.5rem;
font-weight: bold;
```

rules are added to the browser

Ensures optimal bundle size and automatic dead code elimination

2. Component Render

The styled-component is eventually rendered like this and styled-components grabs the styles from the definition and then preprocesses and polyfills the CSS properties if needed and computes a hash. The hash and properties are joined into valid CSS rules and added to the browser.

<StyledParagraph/>

```
. hKgbNJ {
  /*CSS properties*/
  font-size: 1.5rem;
  font-weight: bold;
}
```

📷 A sketch note that I made to teach Styled Components

Hey, welcome to my website!

I am an **experienced Fullstack Engineer from India**. I stay in Hyderabad with my wife and family. Building solid webapps with cool tech is something I really enjoy.

When I was getting started, I learnt most of my skills with the help of tutorials from awesome people like **Wesbos**, **Traversy Media** and more. These days I generally learn new skills from Github and open source documentation.

I have been working for the past 8 years (remotely for 4 years) and I generally work on a complete javascript stack, but I also get to work on Python and Docker at times. Some frameworks/tools that I use regularly include **React, ReactNative, Redux, Xstate, Vue, Nuxt, Angular, Styled-components, Next.js, Webpack, Node.js, MongoDB, FramerMotion, Docker, Kubernetes, AWS**, etc.

I work remotely and I enjoy working so as it gives me an opportunity to be available for longer times with my family and also saves me time that I would otherwise spend in commute.

I spend a lot of time contributing to open source. Starting [rooks](#) and contributing to [nodejs.dev](#) and [styled-components](#) are some of my proudest achievements.

Teaching is Learning

Teaching people how to code is hobby of mine and I have been teaching students all over the globe via [Codementor](#) where I have done over 400 sessions and taught hundreds of students with a 5 star rating.

While working with companies fulltime in the past few years, I also had the opportunity to

- train teams in React, Javascript and Node

- teach students on [Codementor](#)

- make videos on [Youtube](#)

- write a book on [React.js](#)

Teaching is a great way to learn, which is why I always make it a point to at least engage in codementor sessions when I get some time , because that gives me a chance to learn a new skill and also teach it to someone.

1. Learning React Chapter One: Installation and First Steps

React is an exceptional web development tool. It manages to do so much with little code because it is so good and hiding the details from the developers and let them think only about logic. In this set of posts, let's take a tour of React and see what we can learn from it!

OpenSource Work

I created a package called [rooks](#) to help make React development easier. It is a collection of common React custom hooks which you can plug and play into your components. Besides rooks, I also contributed to [styled-components](#) and worked as core contributor for a year. Here is a list of some of my popular open source contributions.

NAME

DESCRIPTION

NAME	DESCRIPTION
gatsby	Build blazing fast, modern apps and websites with React
styled-components	Visual primitives for the component age. Use the best bits of ES6 and
reactour	Tourist Guide into your React Components
nodejs.dev	A new Node.js resource built using Gatsby.js with React.js, TypeScript
rooks	Collection of React hooks ⚓ for everyone.
reverse-interview	Questions to ask the company during your interview
react-i18next	Internationalization for react done right. Using the i18next i18n ecosy
github-profile-readme-generator	:rocket: Generate github profile README easily with latest add-ons li
website	Kyma landing page with blog, documentation and roadmap
react-universal-starter	React@16, react-router@4, redux and webpack@4 starter project
react-lazy-progressive-image	React Progressive images with Lazy loading :zap:
armin	Declarative state machines for React!
rehooks-visibility-sensor	Checks whether a Ref has scrolled into view or not.

What people said about my work 🥰

“Bhargav is awesome! His imaginative teaching style helped us quickly sail through **React.js** and **styled-components** at our company. I highly recommend him as a trainer.

Jayaa Bharadwaj
Lead Fullstack Engineer, Reavidence

Bhargav is one of the best React.js trainers out there. He helped our team learn **React, Redux, ES6 generators and Redux-saga** in a very short amount of time.

Chakravarty
Team Lead, Genisys Group
